Row 1	No, and we do not plan to address this within the next two years	Important but not an immediate priority	Centene has assessed potential risks and opportunities posed by climate change to our organization and stakeholders. For climate-related issues facing the organization, we have determined that those with the potential to have a material impact are either not likely in the near-term, or the near term effects are sufficiently mitigated. We believe our current board members can provide oversight of these types of risks and their mitigations. For example, our current board members have the competence to provide oversight of actuarial soundness of pricing in response to the risk of increased medical costs caused by climate change, and diversification of investments both in type and duration in response to the risk of carbon impacts on our portfolio. Therefore, we do not have plans to add board members with competence on climate-related issues in the near term.

Quarterly

The Enterprise Risk Committee (ERC) is a cross-functional committee that reports to the Board of Directors. The ERC is responsible for identifying, assessing, and managing the company's most significant risks, including climate-related risks. The ERC is composed of senior executives from various departments, including Finance, Operations, and Sustainability. The ERC meets quarterly to review the company's risk profile and to develop strategies to mitigate and manage risks. The ERC also oversees the company's risk management framework and ensures that the company is adequately prepared to manage its risks. The ERC is a key part of the company's risk management process and is essential for ensuring the company's long-term success and sustainability.

IDENTIFYING AND ASSESSING CLIMATE-RELATED RISKS

Centene's ERM risk identification and assessment process is reflective of both a top-down and bottom-up approach. On a quarterly basis, enterprise-wide and business unit risks are identified and assessed with the assistance of the Company's Risk Champions. These are senior executives and other leaders from across all significant functional business areas of the Company who have been charged with working with their teams to identify and communicate risks to objectives and provide risk oversight and monitoring duties at the corporate and/or business unit levels. As a function of this process, Centene maintains a risk register to document the various risks faced by the Company, including descriptions of the impact, mitigation actions and risk owners. All identified significant enterprise risks, including those that have climate change as a driver, are captured within the enterprise risk register.

The ERM team also monitors emerging risks and opportunities and prepares a quarterly report submitted to the Enterprise Risk Committee and the Board. The emerging risk and opportunities report captures a variety of risk information. Through coordination with the environmental, social and governance (ESG) Champions, Climate Change Task Force (CCTF) and Sustainability/ESG team (Sustainability team) the ERM team captures environmental and climate-related risks.

The Company formed a cross-functional stakeholder group called the CCTF at the end of 2020 to facilitate the identification of potential climate-related risks and opportunities and engaged an external consultant to provide overall guidance. The first significant step in the process was to conduct a climate risk identification workshop. The identification of Centene's climate-related risks and opportunities required the Company to determine how climate drives exposures which, in turn, drive certain health outcomes. The CCTF discussed the climate drivers, exposure

pathways and health outcomes identified by the participants in the workshop to educate and inform on the linkages between climate and

certain viruses and airborne allergens and pollutants, leading to increased respiratory illnesses such as chronic obstructive pulmonary disease and asthma. All significant enterprise risks, including those that have climate change as a driver, are highlighted in the quarterly ERM report that is presented to the ERC and the Board of Directors for review and monitoring. Centene has identified climate-related risks as part of its ERM process and modelled internal and external impacts from environmental risks within its annual Own Risk and Solvency Assessment (ORSA) since 2016.

Through its frequent communications with management, the ERM team maintains a listing of all risks posed to the organization. The enterprise-wide risk register is comprised of the most significant risks rated by impact and likelihood. Each of these risks is associated with the most senior leader responsible and maintained in our enterprise governance, risk and compliance application.

Centene intends to continue the assessment approach described here to periodically update climate-related risks and opportunities. As a result of the initial climate risk workshops we conducted, we added a new risk to specifically address climate change in the enterprise risk register. Additionally, functional areas across the organization individually assess and manage the various elements of climate risk. For example, Operations will assess and manage the risk of extreme weather events disrupting member services and Finance will assess and manage the risk of climate change on the value of our investments. This approach enables full integration of climate risks and opportunities into the overall risk management process, as well as singular ownership and accountability at the functional level by Risk and Compliance

	&	
Current regulation	Relevant, always included	Risks and opportunities driven by climate change are becoming increasingly important to our strategy-setting process. As part of our efforts to understand how various climate risk drivers might impact Centene, we considered the TCFD's classification of risks and opportunities: (1) risks and opportunities related to the transition to a lower-carbon economy and (2) risks and opportunities related to the physical impacts of climate c

		<p>Transitioning to a lower-carbon economy may entail extensive policy, legal, technology and market changes as governments, businesses and society seek to prevent the worst impacts of climate change.</p> <p>Proposed SEC rules on climate disclosure in the U.S., as well as already enacted disclosure regulations in the UK, were included in our 2023 climate risk analysis.</p>
Emerging regulation	Relevant, always included	<p>We considered the following excerpt from TCFD to help us consider risks relevant to our organization:</p> <p>Transitioning to a lower-carbon economy may entail extensive policy, legal, technology and market changes as governments, businesses and society seek to prevent the worst impacts of climate change.</p> <p>In addition to the above, our first Climate Risk Workshop included the CCTF discussing emerging climate risks and opportunities.</p>

		downgrades from ratings agencies and therefore not be purchased by Centene. Our Treasury team has engaged with the portfolio manager to better understand the state of our investments and exposure to climate risks.
Reputation	Relevant, always included	<p>We considered the following excerpt from TCFD to help us decide to include the following risks relevant to our organization: Transitioning to a lower-carbon economy may entail extensive policy, legal, technology and market changes as governments, businesses and society seek to prevent the worst impacts of climate change. Depending on the nature, speed and focus of these changes, transition activities may pose varying levels of financial and reputational risk to organizations.</p> <p>Example of a specific risk considered in our assessment: Risk of inadequate climate action impacting our reputation. Stakeholders (for example, investors, governments, business partners, employees, etc.) may consider Centene's response to climate or extreme environmental events inadequate, which could result in reputational risks as well as exposure to litigation risks and concerns. Further, state and federal government partners with whom we do business could implement requirements around climate-related action as part of our contractual obligations with them, creating compliance challenges. Several of Centene's largest shareholders have publicly stated increased expectations for investees to disclose on their assessment of risks related to climate change and corresponding climate action and mitigation plans.</p>

We have not formally estimated the financial impact of this risk, but as it relates to liquidity concerns, we do conduct quantitative assessments of this risk as part of our Own Risk and Solvency Assessment (ORSA), among other internally performed assessments.

Centene's risk management and other processes capture environmental risks such as viral and vector-borne illnesses and new flu strains when relevant. Centene's experience with COVID-19 provides a recent example of how risks are escalated through the Company and mitigations are designed and implemented. As the COVID-19 pandemic developed in the 1st quarter of 2020, Centene enacted COVID-19 pandemic preparedness and response plans throughout the enterprise. Each individual health plan augmented its internal capabilities by leveraging the resources of the entire Centene enterprise. A team of Business Continuity Champions was engaged to daily track updates, review requirements and implement changes as necessary to ensure operational continuity. Centene maintains open communication channels with local government health departments and local providers to detect any significant increases in vector-borne diseases. Poverty, food insecurity, housing instability, education, employment, access to transportation and other circumstances contribute to health disparities among underserved and vulnerable populations. Centene's external partnerships and nationwide initiatives are designed to address these challenges, which can improve our members' ability to deal with gradual air quality degradation and rising temperatures. One such example where Centene seeks to address negative health impacts is through Community Impact Councils (CICs), which are a collaborative assembly of community and civic leaders representing a broad spectrum of stakeholders including local social service agencies, advocacy groups, faith-based organizations, public representatives, managed care organizations and service providers. CICs were designed to use data to identify community level drivers of health and identify ways to improve community outcomes. We anticipate these councils could identify potential climate-related health and social issues arising in communities and be a forum through which ideas and strategies are formed to best mitigate them. At the same time, CICs determine priorities most important to the community, and as Centene represents one stakeholder amidst several we cannot necessarily create or mandate a climate-related project.

Centene aims to build resiliency into all aspects of its business plan. After a severe weather event, our business continuity plans can be activated to allow our team members to continue serving our members and help address critical needs. For example, the Health Net team in California provides special assistance to ensure its members affected by wildfires have access to essential prescription medications, healthcare provider information and other healthcare services.

Centene helps communities enhance capacity for programs that improve access to fresh foods. One example is our partnership with Feeding America and the *FccX Zcf HcXUmUbX FccX Zcf Hca cffck* resource development initiative. This program equips network food banks and Centene health plans with best practice guidelines for meeting the needs of individuals experiencing food insecurity, including screening individuals for food insecurity, and connecting them with access to medically and culturally relevant food to improve nutrition and health outcomes.

Centene has partnered with organizations in several locations to support community gardens and establish agriculture and nutrition education programs for youth and their families. Community residents have opportunities to plant and produce their own nutritious foods while also benefiting the environment. One example of this is providing funding to the City of Sacramento to finish community gardens at a housing development and surrounding community to actively address climate change, which also increases local & sustainable food sourcing to improve food security & related health outcomes. Through these programs and other community engagement efforts, Centene and our subsidiaries strive to improve access to healthy and culturally relevant food, leading to lifestyle changes that subsequently benefit the environment, such as eating fresh foods and cycling or walking when possible. We recognize healthier member populations are better equipped to withstand the impacts of climate change, and we aim to continue our work to promote health security for our members.

Stakeholder expectations

Increased revenues resulting from increased demand for products and services

Opportunity to position Centene as a partner of choice for federal and state governments regarding climate change.

Stakeholders, including government partners, continue to push companies to act and report on sustainability topics. The Department of Defense, General Services Administration and NASA have proposed an amendment that would require certain federal government contractors to disclose their greenhouse gas (GHG) emissions and climate-related financial risks and set targets for GHG reduction. By proactively engaging in these activities, we may enable a better competitive position for contract bids.

Further, we seize opportunities to invest in socioeconomic interventions to decrease member susceptibility to extreme weather events or other climate-related impacts. By working to reduce the negative climate-related health impacts to our members, we could improve both the health and resiliency of the communities we serve, which in turn may lessen the financial impacts to government partners and differentiate Centene as a partner of choice regarding climate change.

We have presented the likelihood and impact ratings under a high mitigation scenario below.

Long-term

Likely

consistent with those included in the 6th Assessment Report. While the report does not provide a ranking or preference on the likelihood of any one scenario over another, we wanted to ensure that the scenarios included in the most recent report were consistent with those included in the 6th Assessment Report.

The report also provides a framework for assessing risks and opportunities in the short, medium and long term as well as the impact of climate change on the business, and aligns the business strategy with the Paris Agreement goals.

Throughout our climate scenario analysis process, we sought to answer the following focal questions:

Based on the results of the climate-risk scenario analysis, Centene is likely to be more impacted by climate-related risks under a scenario in which global action on climate change is low, resulting in greater physical impacts from climate change. This scenario may disproportionately affect our members' health relative to less vulnerable individuals. Centene has fewer risks and more opportunities under a scenario in which global action to reduce carbon emissions is high. None of the risks identified by Centene were assessed higher than moderate impact under an aggressive mitigation scenario in which carbon emissions are greatly reduced.

We concluded health-related physical climate drivers are most likely to shape our future performance (as compared to other drivers such as political/economic). This impact would manifest through increased m...err Q...r

		<p>Risks</p> <p>One example of this member impact is the possibility of increased extreme weather events causing a rapid deterioration in the health of our members. According to the National Oceanic and Atmospheric Administration, National Centers for Environmental Information, the United States alone experienced eighteen weather and climate related disasters in which overall damages/costs reached or exceeded \$1 billion in 2022. These events included wildfires, hurricanes, floods and other severe weather, and they can have an impact on our members' health. For example, wildfire smoke, including deadly pollutants such as fine particulate matter, is linked to health risks such as respiratory infections, cardiac arrest and lung cancer.</p> <p>Opportunities</p> <p>There are also several climate-related opportunities that will impact Centene's business, strategy and financial planning. The potential for optimized use of telehealth is an example. The increased use of telehealth driven by the COVID-19 pandemic has proven its potential to improve the lives of our members by increasing healthcare accessibility and reducing costs. Centene's provider partners are also able to see more members due to less transition time between appointments. As an added benefit, telehealth is environmentally friendly through reduced member travel.</p>
